

## Fixed, Fluid, and Responsive Web Designs

Name: \_\_\_\_\_

1. The world-wide-web is an important part of the Internet. How was it originally used?
2. Briefly, how would you describe how the web has changed today?
3. "Old school" web designs were based on a "layout table" or organized content -- what is a layout table?
4. While layout tables can be and still are used to create layouts, why are they no longer good examples of web design and layout?
5. Because displays on all devices are rectangular, web designs are still based on a "box model". What is the programming code used today to style web designs called?
6. How does a "fixed width design work?
7. What are three advantages of a fixed width design?
